

MOTIVATION LETTER FOR AN APPRENTICESHIP AS AN IT SPECIALIST EFZ APPLICATION DEVELOPMENT

Dear Sir or Madam,

My name is Lua Trauffer, I am 14 years old and currently attend the 8th grade at Progymatte Secondary School in Thun. For quite some time, I have been very interested in computers, technology, and digital media. Therefore, I would like to complete an apprenticeship as an IT Specialist EFZ in Application Development. What I find particularly exciting is the opportunity to develop creative solutions through programming and to work on projects that are used by many people in everyday life.

I enjoy working on the computer and find it fascinating how ideas and code can become fully functioning programs. I am especially interested in how apps, websites, and other digital applications are built and how problems can be solved through logical thinking. I really like the combination of technology, creativity, and precision, and it motivates me to keep learning new things.

I have already gained some initial experience in the technical field. In the elective robotics course, I worked with sensors and technical tasks. Through this, I learned to think logically, solve problems step by step, and work together with others to find solutions. In addition, I participated in the Coding Club for Girls, where I was introduced to the basics of programming. These experiences further strengthened my interest in computer science.

Through various job-shadowing experiences and workshops, I was also able to gain first insights into the field, for example at Informaticon, Comvation, armasuisse, login Berufsbildung, and Google. What I particularly enjoyed was how creative and varied the work in IT can be.

In my free time, I also enjoy working on creative and digital projects. I like using different programs and creating digital content. What I especially enjoy is turning my own ideas into reality and trying out new things. At the same time, I enjoy learning and appreciate opportunities to improve my skills.

At school, I am especially interested in mathematics, computer science, and tasks that require concentration and careful work. I work carefully and reliably and do not give up easily when something is difficult. I enjoy searching for solutions and taking on challenges. I also like working independently, but I can also collaborate well in a team.

In my opinion, the apprenticeship as an IT Specialist EFZ in Application Development fits my interests and strengths very well. In this profession, I would like to learn more about programming, technical concepts, and the development of digital applications. I especially like the fact that in this profession you constantly discover new things and continue to develop yourself. This variety is exactly what makes the profession so exciting for me.

Kind regards,

Lua Trauffer
